IMPORTANT ADVICE TO HOME GARDENERS

The success of your garden depends largely upon your own good efforts, but highly important also is the quality of the seeds and bulbs you plant.

One of the first things for a new gardener to learn is that there are many grades of bulbs and seeds offered on the market.

Large healthy bulbs will produce strong healthy plants, and more and better quality flowers. Cheap low grade bulbs and seeds produce disappointing results and prove more expensive in the long run.

The bulbs and seed you buy are the least expensive part of your garden operations and the better quality of your original purchase will justify the further expenditure of fertilizer, water, and your own time.

NON-WARRANTY—While we exercise the greatest care to have our seeds, bulbs and plants of highest quality, success in gardening depends also upon proper culture, soil, and weather conditions. Therefore, Hallawell Seed Co. gives no warranty, express or implied, as to the productiveness of any seeds, bulbs, or plants it sells, and will not be in any way responsible for the crop. Liability in all instances is limited to the purchase price.

Hallawell's

DAFFODIL BULBS ARE JAN de GRAAFF'S FINEST. All are healthy, extra size No. 1 double nose bulbs. They will produce 2 or more prize blooms per bulb the first year. This is at least twice as many blooms as may be expected from ordinary bulbs. Our list contains a well rounded selection of varieties composed of all forms selected to give you a long flowering season.

CULTURE — In preparing the soil for daffodils mix in 3 or 4 lbs. of bone meal to 100 sq. ft. Set the bulbs 6 inches apart each way and 7 inches deep. Many California gardeners leave them in the ground year after year and plant on top of them, but do not remove the foliage. It must be left to die down naturally.

Fragrant GARDEN HYACINTHS

For Early Spring Bloom

For beauty and fragrance combined, hyacinths are unsurpassed among spring flowering bulbs. They may be used very effectively for edgings, or in groups among other flowers. Plant the bulbs 6 to 7 inches deep and about 6 to 8 inches apart.

In light well drained soil which is not subjected to winter freezing the bulbs may be left in the ground but the general rule is to lift them after the tops have died down about July. Store them in shallow trays and dust with dusting sulphur. Planting time varies with the climate conditions. In the mild winter sections of California we recommend planting about November. Keep them moist by deep irrigation as often as is necessary.

Our GARDEN hyacinths are medium sized bulbs and are intended mainly for outdoor planting where they will produce beautiful large spikes of flowers.

DUKE OF WESTMINSTER—Deep blue, white center.

EDELWEISS—Pure white, very fragrant.

GERTRUDE—Rosy-pink, compact truss.

JAN BOSS—Best deep red.

LADY DERBY—Bright rose pink.

QUEEN OF THE BLUES—Best light blue.

YELLOW HAMMER—Pure yellow. Early.

Exhibition Hyacinths

For Garden or Indoor Bloom

These extra large bulbs will produce giant spikes of lovely flowers.

They are intended for garden planting or for pots, hyacinth glasses, etc., where the largest spikes are desired. In our San Francisco climate we keep the potted hyacinths outdoors in the shade until they are ready to bloom, then they may be taken into the house.

Each 50c; 6 for \$2.45; 12 for \$4.50; 50 for \$16.00

CITY OF HAARLEM—Best exhibition yellow.

INDIGO KING—Deep violet purple.

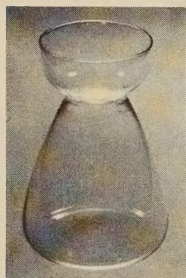

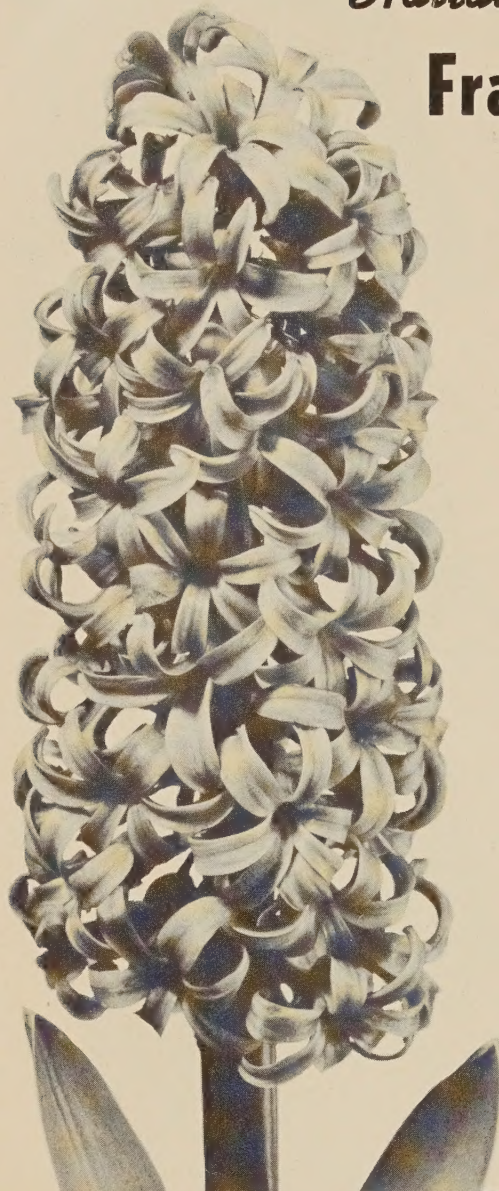

LA VICTOIRE—Glistening carmine red.

PEARL BRILLIANT—Fine pale blue.

L'INNOCENCE—Lovely pure white.

PINK PEARL—Rose pink.

PRINCESS MARGARET—Light pink.

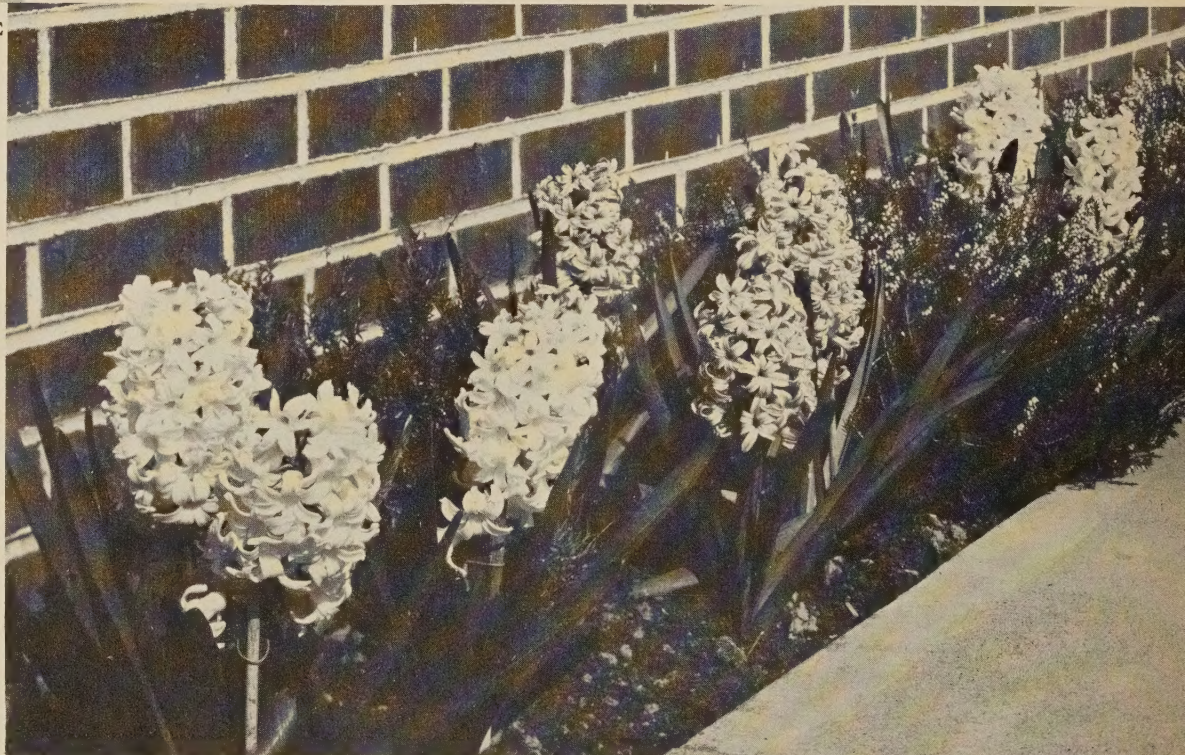

LA VICTOIRE

**HYACINTH
GLASS
CULTURE**

Fill the glass with water to almost touch the base of the bulb. Water evaporation will moisten the tiny root points and set them in action. Keep the glass in a cool dark place, on the floor in a cold corner of the basement (or similar place) covered with a box to keep them dark, add water occasionally to keep glass filled. Bring them to light and warmth when the flower buds are three inches above the bulb, not before. To bring them out sooner may mean disappointing results.

HALLAWELL'S EARLY SPENCER SWEET PEAS

Hallawell's Early Spencer Sweet Peas flower 3 to 4 weeks earlier than any other variety. They are especially desirable for outdoor growing in frost-free sections for winter blooming. We recommend them also for the Hawaiian Islands. They have all the fine qualities of our Giant Spencers, produce giant flowers and very long sturdy stems. In mild climates plant the seeds in August and September for winter bloom.

Hallawell's Early Spencer Mixture

Be sure to shade the bed if planted in hot weather, and when they begin to bloom do not over-water. One good deep irrigation each week will be plenty in medium heavy soil. If they are watered too much, the buds will drop from the stems.
